THE PROBLEM

Window wells, or egress windows, are necessary to provide a safe exit from basements in the case of an emergency. Often left uncovered, open window wells allow debris to collect and hazards for falls and injuries, particularly for pets and small children. Window wells typically vary in size and shape. Finding a cover that fits while also looking professional can be difficult. Many window well covers provide adequate function but look clunky and create a noticeable eyesore around your home.

THE SOLUTION

Window well grates are the most effective solution for keeping your loved ones safe. The team at Wertzbaugher Services customize each grate for a perfect fit and a beautiful look.

THE EXTRAS

In addition to custom, high-quality window well grates from Wertzbaugher Services, **we also offer initial measuring, installation, and accessories.**

Our grates can be made with an access door to ensure a safe exit from the basement. We also provide ladder systems attached to the wall of the window well, so an individual can easily climb out of the egress.

THE MATERIALS

Our window well grates can be made from a variety of materials, depending on desired finish and budget.

- **Carbon steel grates** are strong and durable and are painted for a professional look.
- **Aluminum grates** require no paint and provide a maintenance-free option.
